## Testing

- Each valve is tested with nitrogen @ 1000psig(69bar) to max leak rate of 0.1SCCM.
- Optional tests are available upon request.

## Sour Gas Service

- is provided to meet NACE Standard MR - 01 - 75.

## Packing Adjustment

- Valves are factory adjusted for 1000psig service at 70°F(21°C).
- For services at higher pressure, the packing must be readjusted. This can be done with the valve in - line. Untighten the hex key to remove the handle. Tighten the packing bolt clockwise with the increment of **a quarter of a quarter** turn (22.5°) until leaktight seal is obtained. And then reassemble.
- Exposure of valves to varying temperature can affect the initial packing load. You may need check leak and readjust packing bolt.

## SAFETY in VALVE SELECTION

Proper installation, materials compatibility, operation and maintenance of these valves are the responsibility of the user. The total system design must be taken into consideration to ensure optimal performance and safety.
